FRANCISCO DE CARVALHO PEREIRA

Technical Artist — Tools & Pipeline | Unreal Engine 5, Unity, Python | Render automation & multi-platform optimisation

Marseille, France | fran6pereira@gmail.com | +33 7 69 01 12 95 | Portuguese national, EU work authorisation

Portfolio: lebofran6.github.io/Portfolio/ | LinkedIn: linkedin.com/in/franciscodecarvalhopereira | GitHub: github.com/LeBoFran6

PROFILE

Technical Artist (Tools & Pipeline) specialised in real-time 3D, pipeline automation and multi-platform optimisation. Shipped on 6 console platforms including Nintendo Switch 2. I automate art pipelines in Python and C#: my last render tool cut a half-day manual pass to under 60 seconds and ran in continuous production for 7 months across 4 characters and ~100 animations. I also deliver UE5 virtual production / real-time cinematics for theatrical release. Available for full-time roles.

EXPERIENCE

Freelance Technical Artist / CGI | Independent, clients incl. Isard Film Production

Jun 2024 – Present | Concurrent with in-house roles until Dec 2025, full-time since. ~15 engagements across 10 clients.

- Designed and rendered UE5 CGI shots composited into live action for the feature film La Comtesse aux cinq maris (dir. Aga Cieutat); owned the full chain solo: asset preparation, lighting, rendering, delivery to the edit. Screened theatrically in France, CGR Lescar, 2026.
- Rescued a broken Steamworks multiplayer integration, restoring online sessions on a client build.
- Delivered real-time cinematics and tooling across game, film and visualisation clients.

Technical Artist — Tools & Pipeline | Voxler Games, Marseille

Nov 2024 – Dec 2025 | Let's Sing 2025 / 2026 — Unity — shipped on PS4, PS5, Xbox Series X|S, Nintendo Switch, Switch 2, Xbox One

- Built a headless Blender batch rendering pipeline in Python (naming validation, automatic assembly of a pre-lit scene, material, rig and animation resolution, export of Unity-ready frame sequences) covering 4 characters and ~100 animations; cut a half-day manual pass to under 60 seconds, in continuous production use for 7 months.
- Shipped a Unity animation validation tool in C#: one click applies an animation to a test dummy, catching scale errors invisible in the DCC and making animators independent from developers.
- Engineered a runtime gaze and pupil control system, decoupled from baked animation and reactive to on-screen events.
- Optimised across 6 console targets: reduced draw calls through LOD strategies and batching, holding visual targets across a wide performance spread.

3D Designer — Virtual Try-On Solutions | Fittingbox, Toulouse

Feb 2024 – Jun 2024 | Real-time virtual try-on for international eyewear brands, deployed to web and mobile

- Produced and optimised over 300 real-time assets per month for a live virtual try-on product.
- Modelled luxury eyewear frames under product fidelity and geometry budget constraints.
- Held visual fidelity within strict web and mobile bandwidth budgets, working directly with rendering engineers.

World Builder Intern | Eugen Systems, Paris

Jul 2023 – Jan 2024

- Owned end-to-end environment implementation of a complete production map for WARNO (RTS): layout, terrain, environment data and final optimisation.
- Assembled and maintained 4 modular environment kits, holding consistent real-world scale across a full production map.
- Built terrain and levels under tactical readability and performance constraints.

Freelance Architectural Visualisation | Joël Grau practice, Saint-Gaudens

2023

- Rebuilt broken ArchiCAD geometry in Blender across 2 paid projects (cleanup, retopology, UVs, material assignment) before Unreal Engine 5 integration; still renders lit with Lumen.
- Delivered images used in a building permit application that was filed and approved.

PROJECTS

RUBBER. Technical direction on an arcade racing game in UE5, selected from student pitches. Chaos vehicle dynamics, custom 6-wheel Blender rig, modular destruction system. Released publicly: lefran6.itch.io

Rally Project. Procedural prototyping in UE5 with a dynamic Scene Capture 2D multi-camera system, held at ~13 ms against a 16.6 ms frame budget.

LastMeal. Fishing game built for PlayStation 1 and running on original hardware (Unity, PSXSplash, Lua): 2,000 triangles per scene, 256 x 256 texture atlases.

Interactive CV. Playable CV running directly in the browser, no install, hosted on portfolio.

SKILLS

Engines Unreal Engine 5 (Blueprint, Nanite, Lumen, Chaos Vehicles, Scene Capture 2D), Unity

Programming Python (bpy), C#, Lua

DCC Blender, 3ds Max, Maya, Substance Painter, World Machine

Pipeline Render automation, editor tooling, asset validation, engine integration, multi-platform console optimisation, virtual production / real-time cinematics

EDUCATION

ESMA Toulouse | Game & Level Design, RNCP Level 6 (Bachelor's equivalent, EQF Level 6) | Oct 2020 – Jun 2023

Lycée Saint-John Perse | Baccalaureate Information and Management Systems

LANGUAGES

French (native) | Portuguese (native) | English (C1, professional working proficiency)
